

Quality-Built Furnaces

Furnaces that homeowners count on

Our commitment to quality

Since 1904, Bryant has been improving on indoor comfort technology. We've developed new products and components, and through rigorous testing and retesting, we've learned how to ensure that our products offer homeowners greater value with energy-efficient designs, rugged components, solid craftsmanship and reliable performance. That's why, year after year, homeowners across North America count on Bryant to keep their families comfortable.

With today's gas furnace technology, you can be more comfortable in your home and save money on your utility bills. High-efficiency furnaces (90%+ AFUE) utilize a secondary heat exchanger which allows the furnace to extract more heat from the gas, thus creating the higher efficiency rating.

Concerns over corrosion

The gas vapors that pass through the secondary heat exchanger create a corrosive byproduct. And while all high-efficiency furnaces with 90% AFUE or above, regardless of manufacturer, are susceptible to damage from this highly acidic condensation occurring inside them, we take extra precautions to protect critical parts from corrosion and protect the investment that homeowners have made.

WARRANTY

Bryant furnaces are backed by a 5-year limited warranty. However, our Everlastic™ secondary heat exchangers are backed by a lifetime parts warranty and a 20-year labor warranty. Extended warranties are also available. Ask your trusted Bryant dealer for details.

Safe and safeguarded

Product safety is very important at Bryant. Our furnaces are designed with many automatic features to ensure safe operation, even if a problem were to occur. Our family of residential furnaces has a proud history of high consumer satisfaction.

Bryant's exclusive craftsmanship

Bryant patented the use of polypropylene to prevent corrosion in our high-efficiency furnaces. It is with this exclusive right to use one of the most corrosion-resistant substances available that we are supremely confident that our furnaces exceed even our own high expectations for reliability. In fact, this patented technology makes our furnaces:

- ✓ Certified to exceed the industry standard for corrosion.
- ✓ Less susceptible to clogging than other furnaces which leads to better airflow which leads to greater energy efficiency.
- ✓ Easier to maintain.

A corrosion-resistant coating protects our Everlastic™ secondary heat exchanger.

A Member of the United Technologies Corporation Family.
