Indoor Comfort Solutions for
Unique Applications

Innovation and the Environment

Over 100 years ago, a humble but determined engineer solved one of mankind's most elusive challenges by controlling the indoor environment. A

leading engineer of his day, Dr. Willis Carrier would file more than 80 patents over the course of his career. His genius would enable incredible advancements in health care, manufacturing processes, food preservation, art and historical conservation, indoor comfort and much more.

Carrier's foresight changed the world forever and paved the way for over a century of once-impossible innovations. Yet in addition to being an accomplished inventor, he was also an avid outdoorsman. Carrier recognized the power and beauty of the natural environment. This appreciation of our world and its resources continues to guide Carrier Corporation today. We will never rest on our accomplishments, but instead consistently look for ways to improve our products, our environment and our world.

To help improve the comfort in your world, Carrier offers the Comfort™ series ductless high wall split system. It's an elegant, quiet and economical choice for delivering comfort to indoor spaces where typical forced-air systems can't.

Designed to Fit

1 Unobtrusive Design

Designed to mount on a wall and blend into any interior with its smooth, clean profile, the indoor unit includes motorized louvers that can "sweep" to spread conditioned air throughout the space or they can be "locked-in" to focus on a specific area. It's easy to maintain, too, with an easy-to-remove filter that can be cleaned in any sink.

2 Easy, Effective Comfort

Set your desired temperature on the intuitive, easy-to-use remote, then relax and let the system automatically respond to changes in room temperature as needed. Dehumidification mode helps keep you comfy during hot, sticky summers. And, our available low-ambient kit allows continued operation down to an industry-leading -20° F outdoor temperature.

Comfort Where You Need It

When you need comfort in a new or converted space and ductwork is not available or not an option, Carrier delivers with the Comfort series ductless high wall split system. Perfect for a room addition, a garage or attic conversion or more, this system provides fully-featured comfort with 13.0 SEER cooling efficiency. It uses Puron® refrigerant, an environmentally sound alternative to R-22 refrigerant. And, whether your new space is a well-used game room or seldom-used guest quarters, it's an economical choice that can provide comfort when you need it.

Ultra-Quiet, Relaxing Comfort

With ultra-quiet indoor operation as low as 28 dBA, the Comfort series ductless high wall split system can be as quiet, or quieter, than a whisper. Offering an unobtrusive design, easy and convenient operation and the backing of the world's first name in comfort, this system is a great, economical choice for your unique heating and cooling needs.

Limited Warranty

To the original owner, Carrier warrants its ductless products with a five-year parts and seven-year compressor limited warranty. See warranty certificate at carrier.com for complete details and restrictions. Be sure to ask your Carrier® dealer about optional labor warranties.
