# DataLINE

DataLINE diagnostic software lets you interrogate, configure and monitor the refrigeration unit controller and DataCorder™ trip data recorder with superior precision. It offers many advanced features and supports multiple controller platforms, including Micro-Link™ 3, Micro-Link 2i, Micro-Link 2, and Micro-Link 1 controllers (using DataReader). DataLINE diagnostic software provides solutions for service technicians, shippers and marketing personnel.

## Interrogation

Allows the user to extract information from the refrigeration unit's DataCorder trip data recorder in four ways:

- By date
- By trip
- Last 30 days
- All data

## Advanced Report Features

Text reports may be saved to a standard ASCII formatted file. Eleven types of reports can be generated from interrogated data:

- Sensor
- Sensor Data
- Sensor and Event
- Graphical
- Event
- Controller Pre-trips
- Alarm Summary
- Cold Treatment Summary
- Raw Data
- Custom-Sensor, Graphical, Alarm, Event
- Temperature Chart (Linear, Circular)

turn to the experts 

Provides solutions for service technicians,  
shippers and marketing personnel.
